Lab11

Task 1: File Input READ, WRITE

In this lab, you will learn how to use default library provided by JRE to manage with files e.g., `File`, `FileWriter`, `BufferedReader`. You are about to implement electronic diary. Your task is simply to fill in the missing code in `DiaryRunner.java`.

public static void `readContent(String diaryFileName)`: Import the file “diaryFileName” as an input and read it content.

public static void `newDiary(String diaryFileName, String date, String title, String content)`: Check whether the diaryFilename is exists. If not, create a new one.

Expected output:

```
TAKS1
[diary1.txt]
[DATE]:13/03/2017
[TITLE]:Far far away.
[CONTENT]:Far far away, behind the word mountains, far from the countries Vokalia and
Consonantia, there live the blind texts.
-----

[diary2.txt]
[DATE]:01/03/2017
[TITLE]:A wonderful serenity
[CONTENT]:A wonderful serenity has taken possession of my entire soul, like these
sweet mornings of spring which I enjoy with my whole heart.
-----
```
